

Highly Stable, Metric PC Screw Terminals.

Astoria, NY – Keystone Electronics Corp. has expanded its assortment of PC mount screw terminals to include new metric “snap in” screw terminals in horizontal or vertical mounting.

Rated at 15 and 30 Amps, these new screw terminals are ideally suited for high density packaging. They feature a four (4) or six (6) leg, stable, no-rock design with an exclusive anti-rotation feature. Combined with space-saving, cost effective attributes, the units enable design versatility for universal applications.

Manufactured using Tin-plated .8mm Brass, these terminals are supplied with a combination drive M3, M4 or M5 Brass, Nickel-plated binding head machine screws, either unassembled or with the screw installed and captivated. Terminals are also available without screws supplied.

Keystone Electronics designs and manufactures more than 5,000 interconnect components and hardware in addition to providing stamping, machining and assembly services to meet customer required modifications and special designs.

An in-house application engineering group is on hand to facilitate these needs.
